

‘Interconnections’ Unit of Work for Year 9 Geography

It’s never been easier for students to use and apply spatial technologies!

AUSMEPA is inviting all high schools to participate in the *We Are Ports* Geography Interconnections high school competition from Term 1 – 3 in 2018, with **\$1500 of prize money to be won**. If schools wish to participate, they complete the unit and the students produce a piece of media as their project for their teacher to grade & submit to the competition.

A unit of work has been written for you, in line with the National Curriculum.

*“Absolutely brilliant work. The best I have seen for the Global Interconnections Unit.”
Victorian Geography Teachers Association*

“We are currently working on the unit. Last week we were able to visit the Port and I am a few lessons into the unit you have written up. The content is relevant, and the kids are enjoying doing and seeing something different. There are lots of geographic skills that they can practice, and the websites and activities are interactive”... O’Loughlin College Darwin

“Please pass on my congratulations to your writer(s), the tasks engaged my class and stimulated lots of discussion. Fantastic Unit!” Bunbury Senior High School

The unit of work is supported entirely by online data. Everything students need for their learning experience is online. They will interpret graphs, tables of data and manipulate online maps choosing overlays that explain what they intend to communicate. Students will use geography skills to explore, question and discover why ports are a major component of interconnecting places, trade and consumption.

If you and your school is interested in participating, please email [Julie Nash](mailto:julie.nash@ausmepa.org.au). In 2017 other states participated and teachers and students alike loved this unit. Find further information and student’s submissions [here](#).
